

Our Vision

To be acknowledged for delivering the most efficient small gas turbines in the world.

Our Core Values

- > Being efficient
- > Responsibility
- > Reliability
- > Being professional
- > Commitment to continuous improvement and innovation

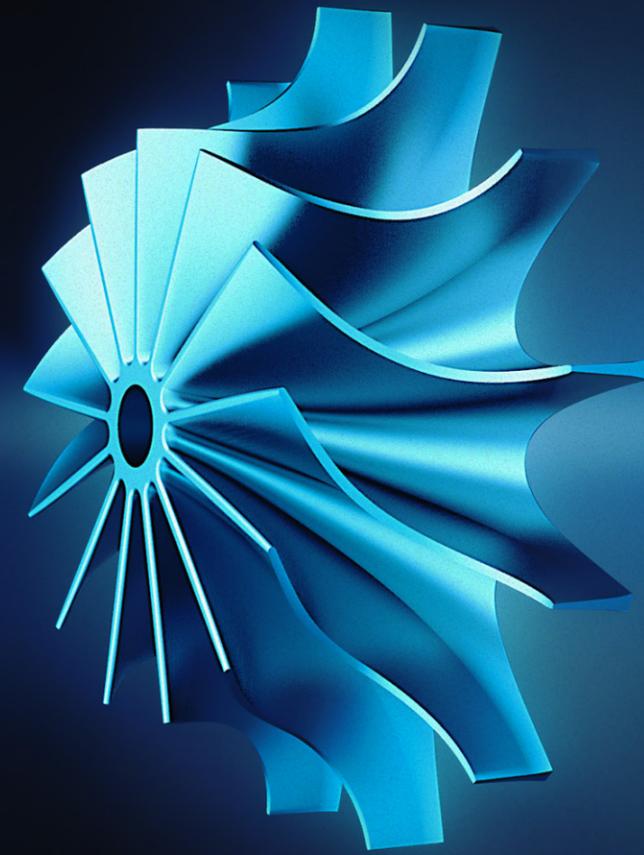

Our Mission

Through innovative design and together with our partners, we manufacture the most efficient gas turbines for the benefit of end-customers around the world to reduce their operating costs, improve their performance, and protect the environment.

Our Vision

To be acknowledged for delivering the most efficient small gas turbines in the world.

> To be acknowledged means for us to be recognised by our customers, partners and even competitors as a meaningful and successful technology provider in our field.

> Our competitive advantage is based on the very high efficiency of our turbines, benefiting our customers and enabling global growth.

Our Mission

Through **innovative design** and **together with our partners**, we manufacture **the most efficient gas turbines** for the benefit of end-customers around the world to **reduce their operating costs, improve their performance, and protect the environment.**

> We achieve our mission by designing innovative products and selecting the most qualified strategic partners.

> Through the very high efficiency of our turbines we enable our customers to reduce their operating costs by generating power and heat more efficiently and with greater flexibility. Our turbines are designed to comply with the strictest environmental requirements.

> We focus on our core competencies and let our partners focus on theirs.

Our Core Values

Responsibility

- > We bear our responsibility towards our own team members and their families, our customers, our products and the environment.
- > We believe that sustainability is our responsibility.
- > We consider the sustainability of each and every one of our decisions.
- > We don't shop around for quick and cheap solutions but rather we seek the most appropriate and cost effective solution that will deliver well into the future.

Being professional

- > Being professional means working and behaving to the highest standards, and conducting oneself with responsibility, integrity and accountability.
- > We think before we act.
- > For us safety comes first.
- > We respect our team members, customers, partners and the other people around us.
- > We are honest.
- > If we fail, we learn and build on that failure.

Commitment to continuous improvement and innovation

- > Our innovations are based on progressive, open-minded and forward-thinking designs backed by thorough research and analysis.
- > We bring disruptive products to the market because we want to make a positive change in the world.
- > Our commitment to innovation requires not just creativity and boldness but also knowledge of market trends and a future orientation to recognise emerging needs—this we achieve by listening carefully.

Reliability

- > Operational reliability is one of the key elements of our products.
- > We are a reliable and supportive partner.
- > In business, reliability is tightly bonded to quality and consistency. To achieve reliability we adopt quality systems and processes in our daily operations. This means delivering the highest level of quality in our technologies, products and documentation.

Being efficient

- > We do the right things and we do things right. We work by applying effective and efficient methods to solve problems.
- > We think first and work smart.
- > We collaborate and think about the use of resources and focus on the things that create real value.
